

GREENART

GREEn ENdeavor in Art ResToration

ABOUT

GREENART proposes new solutions based on green and sustainable materials and methods, to preserve, conserve and restore Culture Heritage.

Our main objective is to produce safe and effective solutions for the corrective and preventive conservation of Culture Heritage, based on environmentally friendly and low impact materials obtained from renewable natural sources or recycled waste.

One of the aim of the project is to make the research, novel materials and knowledge developed in GREENART accessible to the scientific and art conservation communities, industry and civil society through the involvement of citizens and users.

Our ambition is to set these new classes of materials as standards in the restoration practice, and as models of cutting-edge technologies to be transferred in transversal fields such as food industry, detergency, cosmetics, and tissue engineering.

NOVEL MATERIALS

Protective coatings based on green materials from waste and plant proteins

Foams and packaging materials made by biodegradable polymers

Consolidants based on natural polymers from renewable sources

Gels and cleaning fluids made from natural waste

Green tech solutions for monitoring Cultural Heritage assets non-invasively

IMPACTS

The use of waste and the improved sustainability of the GREENART solutions are expected to provide a model for reducing environmental impacts in several sectors.

In the field of art conservation, GREENART will introduce solutions to end-users and stakeholders.

GREENART is represented by the very core feature of the new systems, which will save the costs of production upscale and waste management.

GREENART produces solutions to make Cultural Heritage assets well preserved and accessible to the citizens.

Research and Innovation in Art Conservation

PARTNERS

PROJECT DETAILS

Grant Agreement Number: 101060941
Project full title: GREEn ENdeavor in Art ResToration
Project acronym: GREENART
Granting authority: European Research Executive Agency
Start date of the project: 1st October 2022
Duration: 36 Months
EU Contribution: 3,826,282.50 Euro
